- A. named
- B. believed
- C. started
- D. enjoyed

<Reading Section>

Have you ever asked your watch about your health? Many years ago, this was a strange idea. Now, many companies are creating “smartwatches” which support our lives and our health.

Some of these smartwatches can check your heart. Special lights are behind the face of the watch. They flash off and on. When this happens, this smartwatch can make information about your heart for your doctor. This information can tell your doctor about any problems, and you can get better advice.

Also, smartwatches can help you exercise. If you are running, these smartwatches can understand how far you have gone from your home. They have special technology which understands how long you are moving, and they can even tell you how many calories you have used. Now, many trainers in gyms are happy about these smartwatches because they help many people become stronger.

Smartwatches can also help you when you have an accident. For example, if you have fallen from a high place, the technology in smartwatches can understand it. Your smartwatch will ask you, “Are you okay?” If there is no answer, it can call a hospital. The hospital will find your watch with its GPS technology. In these ways, a smartwatch can save your life.

Smartwatches are helpful for our lives. They can check your heart, help you exercise and also save your life. These are a few examples about how companies are working for sustainable development goals in health.

21. What is this text about?

- A. Using smartwatches is a strange idea.
- B. Our lives are supporting watches.
- C. How to create a smartwatch.
